

Spanispace

Codebase Audit Report

22 Issues to Fix Before Launch

Generated: March 25, 2026

Repository: github.com/linmucassi/spanispace

Live site: spanispace.com (Netlify)

CRITICAL (Broken): 7 issues -- App fundamentally non-functional

HIGH (Unprofessional): 7 issues -- Damages credibility on inspection

MEDIUM (Technical): 8 issues -- Polish, config, and best practices

CRITICAL -- Broken / Non-Functional (7 issues)

#1 Forms submit to placeholder URLs

Location: `app/join-waitlist/page.tsx:26`, `app/coming-soon/page.tsx:34`

Problem: Both forms POST to literal strings 'YOUR_APPS_SCRIPT_URL_HERE' and 'YOUR_GOOGLE_APPS_SCRIPT_URL_HERE'. Every submission fails with a network error. Users who fill in their details see an error message or get no response.

Fix: Replace with a real backend endpoint (Google Apps Script, Netlify Functions, or a dedicated API). Alternatively, temporarily replace the forms with a `mailto:` link or disable them with a 'coming soon' message.

#2 10 of 15 job listings are expired

Location: `data/constants.ts:4-155`

Problem: As of March 25, 2026, ten jobs have expiry dates that have already passed (ranging from Feb 15 to Mar 15). There is no logic to hide, grey out, or label expired jobs -- they display identically to active ones. Expired jobs: #2, #3, #4, #5, #6, #8, #10, #11, #13, #14.

Fix: Add filtering logic to hide or visually flag expired listings. Implement a date comparison check in JobBoard. Refresh the data with current job listings.

#3 ALL academic deadlines are over a year old

Location: `data/constants.ts:184-188`

Problem: Every single university deadline is from late 2024 or early 2025: Wits (2024-11-25), UCT (2024-12-31), UP (2025-01-15). This instantly signals the site is abandoned or unmaintained.

Fix: Update with current 2026 application deadlines for SA universities. Consider building a system to flag stale dates.

#4 ALL training dates are in the past

Location: `data/constants.ts:157-182`

Problem: All three training programs show dates from Dec 2024 - Feb 2025: 'CV Mastery' (Dec 10 2024), 'AI for Devs' (Jan 15 2025), 'Cloud Foundations' (Feb 1 2025). Users see events that happened over a year ago.

Fix: Update with future dates or label as 'Past Events' with upcoming cohort dates. Add a 'next cohort' date field to the Training type.

#5 No mobile navigation menu

Location: `components/Navbar.tsx:47`

Problem: Navigation links use 'hidden md:flex' -- completely invisible on mobile. There is no hamburger icon, slide-out drawer, or any mobile menu implementation. Mobile users can only see the logo, Login, and Enroll Now -- they cannot reach Jobs, Training, Academic, or Success Stories.

Fix: Add a hamburger button visible on mobile that toggles a slide-out or dropdown menu with the nav links.

#6 8+ buttons do absolutely nothing

Location: `Navbar.tsx:65-69`, `layout.tsx:30`, `Hero.tsx:21-24`, `TrainingSection.tsx:34`, `Footer.tsx:39`

Problem: The following buttons have no `onClick` handler and no `href`: 'Login', 'Enroll Now', 'Enroll For Training Now' (mobile CTA), 'Browse Opportunities', 'Join a Bootcamp', 'Reserve My Spot' (x3), and the footer newsletter 'Join' button. Clicking any of them does nothing.

Fix: Wire each button to its intended destination: Login -> `/join-waitlist` or auth page, Enroll Now -> `/coming-soon`, Browse

Opportunities -> #jobs scroll, Join a Bootcamp -> #training scroll, Reserve My Spot -> /coming-soon, Newsletter Join -> form submission endpoint.

#7 Job filter dropdown is non-functional

Location: `components/JobBoard.tsx:15-20`

Problem: The 'All Types / Remote / Hybrid / On-site' select element has no `onChange` handler. Selecting any option has zero effect -- the job list does not filter.

Fix: Add state management (`useState`) for the selected filter and filter the `JOBS` array before rendering. Mark `JobBoard` as 'use client' to enable interactivity.

HIGH -- Looks Unprofessional (7 issues)

#8 Placeholder image from `picsum.photos`

Location: `components/AcademicPortal.tsx:36`

Problem: The Academic section uses `'https://picsum.photos/seed/academic/800/600'` which loads a random stock photo from an external placeholder service. The image content is unrelated to education and signals 'unfinished template' to any visitor.

Fix: Replace with a real, relevant image hosted in `/public/assets/`. Use the `Next.js Image` component for optimization.

#9 Apply links go to generic search pages, not actual jobs

Location: `data/constants.ts (applyLink fields)`

Problem: Most 'Apply Now' links point to generic search result pages like `'za.indeed.com/q-remote-jobs.html'` or `'za.linkedin.com/jobs/remote-work-jobs'`. Users click 'Apply Now' and land on a search page with thousands of results -- they cannot find the specific job that was listed.

Fix: Replace each `applyLink` with the direct URL to the specific job posting. If the direct link is unavailable, link to the company's careers page with the role name pre-filled.

#10 Dead links throughout the site

Location: `components/Footer.tsx:29-49`, `app/join-waitlist/page.tsx:77`, `app/coming-soon/page.tsx:174`

Problem: Footer links for 'About Us', 'Careers', 'Privacy', 'Terms', and 'Cookie Policy' all point to `'#'` (nowhere). Meanwhile, the waitlist and coming-soon forms link to `'/privacy'` which does not exist as a route -- users get a 404.

Fix: Create `/privacy` and `/terms` pages (even minimal ones), or remove the links. Create an About page or point the link to an anchor section. Remove 'Careers' if not hiring.

#11 Copyright says 2024

Location: `components/Footer.tsx:44`

Problem: Footer reads '2024 SPANISPACE. ALL RIGHTS RESERVED.' -- it's now 2026. This is a small detail but signals neglect and undermines trust.

Fix: Update to '2026' or dynamically generate with `new Date().getFullYear()`.

#12 Company logos imply nonexistent partnerships

Location: `components/Hero.tsx:29-34`

Problem: The hero section displays Amazon, Google, Slack, and Netflix logos (from Wikimedia Commons) in a row beneath the headline. This layout convention universally implies 'trusted by' or 'our partners'. If Spanispace has no relationship with these companies, this is misleading and potentially a trademark issue.

Fix: Remove the logos entirely, or replace with logos of actual partners/employers. If keeping for aspirational purposes, add

a clear label like 'Where our graduates aim to work'.

#13 Success stories may be fabricated

Location: `components/SuccessStories.tsx:14-17`

Problem: Testimonials claim placements at Meta, ABSA, and AWS with specific names (Sarah J., David K., Lindiwe M.) and 5-star ratings. If these are fictional, this constitutes false advertising and destroys credibility if anyone investigates.

Fix: Use real testimonials from actual users, or clearly label as 'example outcomes'. Remove specific company names if placements are not verified.

#14 '98% success rate' claim with no source

Location: `components/AcademicPortal.tsx:38-39`

Problem: The stat card reads '98% success rate for learners placed in vocational programs via Spanispace 2024'. For a platform that launched in 2024 with no visible user base, this reads as fabricated. There is no source, methodology, or sample size provided.

Fix: Remove the statistic, or replace with a real, verifiable metric. If keeping, add a footnote with methodology and sample size.

MEDIUM -- Technical / Polish (8 issues)

#15 Missing Next.js image domain configuration

Location: `next.config.ts`

Problem: The app uses external images from `upload.wikimedia.org` and `picsum.photos` but `next.config.ts` has no `images.remotePatterns` configured. Current `<img>` tags bypass Next.js image optimization entirely. If switched to `next/image`, they would fail without domain whitelisting.

Fix: Add `remotePatterns` to `next.config.ts` for any external image domains used, or host images locally.

#16 No Netlify deployment configuration

Location: Root directory (missing `netlify.toml`)

Problem: The site is hosted on Netlify but has no `netlify.toml`. Next.js on Netlify requires the `@netlify/plugin-nextjs` for SSR routes, API routes, and server-side features to work. Without it, dynamic pages and form submissions may break in production.

Fix: Add a `netlify.toml` with the Next.js plugin configured and proper build settings.

#17 External links open in same tab

Location: `components/JobBoard.tsx:60`

Problem: All 'Apply Now' job links use plain `<a href>` without `target='_blank'`. Clicking 'Apply Now' navigates the user away from Spanispace entirely with no way to return except the browser back button.

Fix: Add `target='_blank'` and `rel='noopener noreferrer'` to all external apply links.

#18 Orphan files from non-Next.js setup

Location: `index.html`, `index.tsx`, `metadata.json` (repo root)

Problem: These three files appear to be remnants of a StackBlitz or Bolt setup. `index.html` loads Tailwind via CDN and `index.tsx` creates a client-side React app that duplicates the entire Next.js app. `metadata.json` requests geolocation permission. None are used by Next.js.

Fix: Delete `index.html`, `index.tsx`, and `metadata.json` from the repository root.

#19 Unused React import in constants

Location: *data/constants.ts:1*

Problem: 'import React from react' is imported but never used in the data file. This triggers linting warnings and adds unnecessary confusion.

Fix: Remove the unused import line.

#20 No Open Graph or social sharing metadata

Location: *app/layout.tsx:10-13*

Problem: The app only sets title and description in metadata. There are no Open Graph (og:image, og:title) or Twitter Card meta tags. When shared on social media, the link preview will have no image and may show incomplete information.

Fix: Add openGraph and twitter fields to the metadata export in layout.tsx with a branded preview image.

#21 No custom 404 page

Location: *app/ directory (missing not-found.tsx)*

Problem: Missing routes display the default Next.js 404 page with no Spanispace branding. Users who hit a dead link (e.g., /privacy, /about) see a generic framework error page.

Fix: Create app/not-found.tsx with Spanispace branding and a link back to the homepage.

#22 Newsletter signup has no backend

Location: *components/Footer.tsx:37-39*

Problem: The footer email input and 'Join' button have no form submission logic at all -- not even a placeholder URL. There is no onSubmit, no fetch call, no action attribute. Users type their email, click Join, and nothing happens.

Fix: Wire up to a mailing list service (Mailchimp, ConvertKit, etc.) or the same backend as the waitlist form.

Priority Execution Order

1. Wire up form backends or show 'coming soon' messaging (#1, #22)
2. Remove / flag expired jobs, trainings, and deadlines (#2, #3, #4)
3. Add mobile hamburger navigation menu (#5)
4. Connect all dead buttons to real destinations (#6)
5. Make job filter dropdown functional (#7)
6. Replace placeholder image with real asset (#8)
7. Fix apply links to point to actual job postings (#9)
8. Remove or substantiate misleading claims (#12, #13, #14)
9. Create /privacy, /terms pages or remove links (#10)
10. Update copyright year (#11)
11. Add netlify.toml for deployment (#16)
12. Clean up orphan files (#18, #19)
13. Add target='_blank' on external links (#17)
14. Configure Next.js image domains (#15)
15. Add OG meta tags and custom 404 page (#20, #21)

End of report.
