This commit delivers three major features (isiZulu translation, self-contained job application system, Netlify Forms backend) and fixes 19 of the 22 audit issues identified in the initial codebase review. The remaining 3 issues require business decisions or content from the team.

NEW FEATURE: isiZulu / English Translation System

Full i18n infrastructure with instant language switching

Built a custom translation system using React Context. The entire UI -- every heading, button, label, placeholder, and status message -- switches instantly between English and isiZulu when the user taps the language toggle. The selected language persists in localStorage so it survives page reloads. The HTML lang attribute updates dynamically for accessibility and SEO.

Over 150 UI strings were translated to isiZulu. Translations should be reviewed by a native isiZulu speaker for accuracy.

```
lib/i18n/context.tsx    -- TranslationProvider + useTranslation() hook
lib/i18n/en.ts          -- 150+ English strings (nav, hero, jobs, training, forms, etc.)
lib/i18n/zu.ts          -- 150+ isiZulu translations
components/LanguageToggle.tsx -- Toggle button with ZA/GB flag
app/providers.tsx       -- Client-side providers wrapper
```

How it works

1. TranslationProvider wraps the entire app (via providers.tsx in layout.tsx)
2. Any component calls useTranslation() to get the t() function and current locale
3. t('jobs.title') returns the translated string for the current language
4. LanguageToggle in the Navbar lets users switch with one tap
5. All components were converted to 'use client' to access the translation context

NEW FEATURE: Self-Contained Job Application System

Job detail page -- /jobs/[id]

Each job now has its own page showing full details: role, company, location, job type, expiry date, and verification status. Active jobs show a prominent 'Apply for this Position' button. Expired jobs show a clear expiration notice with no apply option. The page links back to the job board.

```
app/jobs/[id]/page.tsx
```

Application form -- /jobs/[id]/apply

A clean, accessible form designed for the SA market. Fields prioritize phone and WhatsApp (more common than email for many job seekers). Required fields are only name and phone -- keeping the barrier to entry as low as possible.

Fields: Full Name*, Phone*, WhatsApp (optional), Email (optional), Area/City, 'Tell us about yourself' free text.

On success, shows a confirmation screen. Expired jobs redirect back to the detail page.

```
app/jobs/[id]/apply/page.tsx
```

Job posting page -- /post-job

Allows anyone (companies or individuals) to post a job. Designed for informal employers too -- the form uses plain language like 'What needs to be done?' and 'What will you pay?' instead of corporate jargon. Job types include Full-time, Part-time, Contract, and Once-off.

Fields: Name/Company*, Phone*, WhatsApp, Email (optional), Job Title*, Description*, Location*, Job Type, Pay.

Linked from Navbar ('Post a Job') and the CTA section on the homepage.

`app/post-job/page.tsx`

Job board now links to detail pages

The job listing table was updated so job titles are clickable links to `/jobs/[id]`. The 'Apply Now' column was changed to 'View Details' pointing to the detail page, rather than linking to external sites like Indeed.

`components/JobBoard.tsx`

NEW FEATURE: Netlify Forms Backend (Zero Config)

All forms now submit to Netlify Forms -- no external service required

Created a shared `submitNetlifyForm()` helper that POSTs form data to Netlify's built-in form handling. Netlify automatically detects, stores, and lets you view all submissions in the Netlify dashboard (Site > Forms).

A hidden HTML file (`public/__forms.html`) declares all form schemas so Netlify can detect them at build time. Honeypot fields are included for basic spam protection.

Forms covered:

- job-application: from `/jobs/[id]/apply`
- job-posting: from `/post-job`
- waitlist: from `/join-waitlist` and `/coming-soon`
- newsletter: from footer email signup

This replaces the previous 'YOUR_APPS_SCRIPT_URL_HERE' placeholder URLs that caused every form submission to fail.

```
lib/netlifyForms.ts    -- Shared form submission helper
public/__forms.html    -- Netlify form detection (5 forms)
app/join-waitlist/page.tsx -- Rewritten to use Netlify Forms
app/coming-soon/page.tsx  -- Rewritten to use Netlify Forms
components/Footer.tsx    -- Newsletter now functional
```

FIXES: 19 of 22 Audit Issues Resolved

#1 -- Forms submit to placeholder URLs [FIXED]

Both join-waitlist and coming-soon forms were POSTing to literal placeholder strings. Rewired all forms to Netlify Forms.

```
app/join-waitlist/page.tsx
app/coming-soon/page.tsx
```

#2 -- 10 of 15 job listings expired [FIXED]

Added date comparison logic. Expired jobs sort to the bottom, display at 50% opacity, show a red 'Expired' badge, and have their apply link disabled.

```
components/JobBoard.tsx
```

#3 -- All academic deadlines over a year old [FIXED]

Added expiry detection. Past deadlines show 'Deadline Passed' tag, dimmed styling, and struck-through date text.

```
components/AcademicPortal.tsx
```

#4 -- All training dates in the past [FIXED]

Past events get a 'Past Event' badge, dimmed card, and disabled button.

```
components/TrainingSection.tsx
```

#5 -- No mobile navigation menu [FIXED]

Built a hamburger menu with animated icon (three bars morph to X). Opens a slide-down menu with all nav links plus Post a Job and Enroll Now. Closes on link tap.

```
components/Navbar.tsx
```

#6 -- 8+ buttons do nothing [FIXED]

Every dead button now navigates somewhere:

- 'Browse Opportunities' -> #jobs
- 'Join a Bootcamp' -> #training
- 'Enroll Now' -> /join-waitlist
- 'Post a Job' -> /post-job
- 'View Details' -> /jobs/[id]
- Mobile CTA -> #jobs
- Newsletter Join -> Netlify Forms submit

```
components/Hero.tsx
components/Navbar.tsx
components/MobileCTA.tsx
components/Footer.tsx
```

#7 -- Job filter dropdown non-functional [FIXED]

Added useState for the selected filter and onChange handler. Filter options: All Types, Remote, Hybrid, On-site, Learnership. Shows empty state message when no matches.

```
components/JobBoard.tsx
```

#8 -- Placeholder image from picsum.photos [FIXED]

Removed the random stock photo. Simplified the Academic section to focus on content.

`components/AcademicPortal.tsx`

#11 -- Copyright says 2024 [FIXED]

Replaced hardcoded '2024' with dynamic new Date().getFullYear().

`components/Footer.tsx`

#12 -- Company logos imply nonexistent partnerships [FIXED]

Removed the Amazon, Google, Slack, Netflix logo grid from the hero section entirely.

`components/Hero.tsx`

#13 -- Success stories may be fabricated [FIXED]

Replaced the fake testimonials section with a 'Join the Movement' CTA section that drives users to /join-waitlist or /post-job.

`components/SuccessStories.tsx`

#14 -- '98% success rate' claim with no source [FIXED]

Removed the stat card from the Academic section.

`components/AcademicPortal.tsx`

#15 -- Missing Next.js image domain config [FIXED]

Added images.remotePatterns for upload.wikimedia.org and picsum.photos.

`next.config.ts`

#16 -- No Netlify deployment configuration [FIXED]

Added netlify.toml with build command, publish directory, and @netlify/plugin-nextjs.

`netlify.toml`

`package.json`

#17 -- External links open in same tab [FIXED]

Job apply links now use target='_blank' rel='noopener noreferrer'. (Note: apply links now go to internal detail pages, but any remaining external links have this fix.)

`components/JobBoard.tsx`

#18 -- Orphan files from non-Next.js setup [FIXED]

Deleted index.html (CDN Tailwind loader), index.tsx (duplicate React app), and metadata.json (StackBlitz config with geolocation permission).

`index.html` (DELETED)

`index.tsx` (DELETED)

`metadata.json` (DELETED)

#19 -- Unused React import in constants [FIXED]

Removed 'import React from react' from data/constants.ts.

`data/constants.ts`

#20 -- No OG/social meta tags [FIXED]

Added openGraph and twitter metadata with title, description, site name, and logo image. Added metadataBase pointing to https://spanispace.com.

`app/layout.tsx`

#21 -- No custom 404 page [FIXED]

Created a branded 404 page with Spanispace logo, translated message, and 'Back to Home' link.

[app/not-found.tsx](#)

#22 -- Newsletter signup has no backend [FIXED]

Footer email + Join button now submits to Netlify Forms with success/error feedback.

[components/Footer.tsx](#)

REMAINING: 3 Issues Requiring Team Input**#9 -- Generic apply links (not blocking)**

The old generic Indeed/LinkedIn links are now bypassed -- users apply through the on-site form instead. However, fresh job data with accurate details would improve the listings. Action: Provide updated job listings when available.

#10 -- Dead privacy/terms links

Footer still links to '#' for Privacy, Terms, and Cookie Policy. The waitlist/coming-soon forms reference /privacy which does not exist. Action: Provide legal text so /privacy and /terms pages can be created.

#Content -- Mostly expired static data

The auto-hide logic handles display, but the site will look sparse with most content flagged as expired.

Action: Provide updated job listings, upcoming training dates, and 2026 university deadlines.

Complete File Manifest (30 files changed)

NEW FILES (13)

- + `app/jobs/[id]/page.tsx` *Job detail page*
- + `app/jobs/[id]/apply/page.tsx` *Job application form*
- + `app/not-found.tsx` *Custom branded 404 page*
- + `app/post-job/page.tsx` *Job posting form*
- + `app/providers.tsx` *Client-side providers wrapper*
- + `components/LanguageToggle.tsx` *English/isiZulu toggle button*
- + `components/MobileCTA.tsx` *Mobile bottom CTA bar*
- + `lib/i18n/context.tsx` *Translation provider + useTranslation hook*
- + `lib/i18n/en.ts` *English translation strings (150+)*
- + `lib/i18n/zu.ts` *isiZulu translation strings (150+)*
- + `lib/netlifyForms.ts` *Netlify Forms submission helper*
- + `netlify.toml` *Netlify build + plugin config*
- + `public/__forms.html` *Netlify form detection (5 forms)*

MODIFIED FILES (14)

- ~ `app/coming-soon/page.tsx` *Rewritten: Netlify Forms, cleaner UI*
- ~ `app/join-waitlist/page.tsx` *Rewritten: Netlify Forms, cleaner UI*
- ~ `app/layout.tsx` *Added Providers wrapper, OG meta, MobileCTA*
- ~ `components/AcademicPortal.tsx` *Added translations, expiry detection, removed 98% stat + placeholder image*
- ~ `components/Footer.tsx` *Added translations, newsletter Netlify Forms, dynamic year*
- ~ `components/Hero.tsx` *Added translations, removed company logos, wired buttons*
- ~ `components/JobBoard.tsx` *Added translations, filter logic, expiry detection, detail links*
- ~ `components/Navbar.tsx` *Added translations, mobile menu, language toggle, post-job link*
- ~ `components/SuccessStories.tsx` *Replaced fake testimonials with CTA section*
- ~ `components/TrainingSection.tsx` *Added translations, expiry detection*
- ~ `data/constants.ts` *Removed unused React import*
- ~ `next.config.ts` *Added images.remotePatterns*
- ~ `package.json` *Added @netlify/plugin-nextjs*
- ~ `package-lock.json` *Updated lockfile*

DELETED FILES (3)

- `index.html` *Orphan: CDN Tailwind loader from StackBlitz*
- `index.tsx` *Orphan: Duplicate React app from StackBlitz*
- `metadata.json` *Orphan: StackBlitz config with geolocation*

To deploy:

1. Grant BrendonM96 collaborator access on github.com/linmucassi/spanispace
2. Push will go to main branch (commit 1e4c607)
3. Netlify auto-deploys from main -- site updates within minutes
4. View form submissions at: Netlify Dashboard > Site > Forms

End of report.
